# **QueryStream Chatbot Integration Guide**

# Quick Setup (3 Easy Steps)

#### **Step 1: Download the Files**

Save these three files to your project directory:

- chatbot.css (styles)
- chatbot.js) (functionality)
- (chatbot.html) (HTML widget)

#### **Step 2: Add to Your Pages**

Add this code to **EVERY page** where you want the chatbot (before the closing (</body>) tag):

```
html
<!-- QueryStream AI Chatbot -->
<link rel="stylesheet" href="chatbot.css">
<!-- Copy and paste the entire content from chatbot.html here -->
<div class="chatbot-widget">
  <!-- All the chatbot HTML goes here -->
</div>
<script src="chatbot.js"> </script>
```

## **Step 3: Set Your API Key**

In (chatbot.js), replace this line:

```
javascript
const GEMINI_API_KEY = 'YOUR_GEMINI_API_KEY';
```

With your actual Gemini API key:

```
javascript
const GEMINI_API_KEY = 'your_actual_api_key_here';
```

# **Complete Integration for Each Page**

#### For index.html:

```
html
<!DOCTYPE html>
<html lang="en">
<head>
  <!-- your existing head content -->
  <link rel="stylesheet" href="chatbot.css">
</head>
<body>
  <!-- your existing page content -->
  <!-- Add chatbot before closing body tag -->
  <!-- Copy the entire chatbot.html content here -->
  <script src="chatbot.js"> </script>
</body>
</html>
```

#### For about.html, faq.html, contact.html, services.html, industries.html:

Same process - just add the CSS link, HTML content, and JavaScript file to each page.

#### Secure API Key Setup (Recommended)

# **Option A: Environment Variables (Vercel)**

- 1. In your Vercel dashboard, go to Settings > Environment Variables
- 2. Add: (GEMINI\_API\_KEY) = (your\_actual\_api\_key)
- 3. Update (chatbot.js):

```
javascript
const GEMINI_API_KEY = process.env.GEMINI_API_KEY || 'fallback_key';
```

## **Option B: Server-Side API Route (Most Secure)**

Create (api/chat.js):

javascript

```
export default async function handler(req, res) {
         if (req.method !== 'POST') {
                   return res.status(405).json({ message: 'Method not allowed' });
         }
          const GEMINI_API_KEY = process.env.GEMINI_API_KEY;
          const { message } = req.body;
         try {
                   const response = await fetch('https://generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/gemini-2.0-flash:generativelanguage.googleapis.com/v1beta/models/generativelanguage.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleapis.googleap
                            method: 'POST',
                            headers: {
                                     'Content-Type': 'application/json',
                                     'X-goog-api-key': GEMINI_API_KEY
                           },
                            body: JSON.stringify({
                                     contents: [{ parts: [{ text: message }] }]
                           })
                  });
                   const data = await response.json();
                   res.status(200).json({ response: data.candidates[0].content.parts[0].text });
         } catch (error) {
                   res.status(500).json({ error: 'Failed to get response' });
         }
}
```

Then update the callGeminiAPI function in chatbot.js:

```
javascript

async function callGeminiAPI(userMessage) {
   const response = await fetch('/api/chat', {
      method: 'POST',
      headers: { 'Content-Type': 'application/json' },
      body: JSON.stringify({ message: userMessage })
   });

const data = await response,json();
   return data.response;
}
```

- 🔽 Al Integration: Google Gemini 2.0 Flash
- QueryStream-Only Responses: Refuses unrelated questions
- 15-Minute Idle Timeout: With warning message
- GDPR Disclaimer: "By chatting, you agree to our disclaimer"
- Mobile Responsive: Works on all devices
- Anthropic Design: Matches your website perfectly
- Quick Actions: Pre-built service questions
- **Typing Indicators**: Professional chat experience
- Notification Badge: Shows when chat is closed

#### Customization

#### **Change Colors:**

Edit the CSS variables in chatbot.css:

```
CSS
:root {
  --royal-blue: #2563eb; /* Change main blue color */
  --royal-green: #059669; /* Change green accent */
  --cream: #f8f6f0; /* Change background */
}
```

## **Modify Welcome Message:**

Edit the welcome message in (chatbot.html):

```
html
<h4> <h4> Welcome to QueryStream!</h4>
Your custom welcome message here...
```

#### **Update Knowledge Base:**

Modify the (querystreamContext) variable in (chatbot.js) to add or change business information.

# Testing

- 1. Open any page with the chatbot
- 2. Click the blue chat bubble in bottom-right corner
- 3. Try these test messages:
  - "What services do you offer?"
  - "How much does it cost?"

- "What's the weather like?" (should refuse and redirect)
- 4. **Test mobile responsiveness** on different screen sizes
- 5. **Test idle timeout** by waiting 15+ minutes

# 🚀 Deployment to Vercel

- 1. **Upload all files** to your Vercel project
- 2. **Set environment variable**: (GEMINI\_API\_KEY) in Vercel dashboard
- 3. **Deploy**: (vercel --prod)
- 4. **Test live**: Check that chatbot appears and responds correctly

# Support

If you need help with integration:

- Email: hello@querystream.co.uk
- Response: Within 4 hours
- Documentation: This guide covers all setup steps

## 🞉 You're Done!

Your QueryStream AI chatbot is now ready to help customers 24/7 with:

- Service information
- Pricing details
- Business hours
- Contact information
- Lead qualification
- Professional responses

The chatbot will appear on every page where you add the code and provide intelligent, QueryStream-specific assistance to your website visitors!
